Mortality statistics of 1,423 cities and towns of the United States for the year ended December 31, 1903.

The following table shows the mortality of each city, incorporated town, and village, the mortality rate being based upon the population according to the United States census of 1900, the Census Bureau's estimated population for 1903, and the local estimated population for 1903. It also gives the total mortality from certain contagious diseases.

This table has been compiled and prepared in the Bureau of Public Health and Marine-Hospital Service from replies received in response to the following circular letter, which was addressed to every city, incorporated town, and village in the United States having a population according to the United States census of 1900 of 1,000 or more.

The total number of letters thus addressed was 3,750; 1,716 replies were received, of which number only 1,423 could be utilized, 293 being incomplete.
